

Introducing the...

“CHICAGO RAKE”

At the request of the City of Chicago, Barber engineers designed an attachment for the SURF RAKE which penetrates extremely deep in the sand.

The new “Chicago Rake” option digs down into the sand, elevating deeply buried debris and aerates the sand.

The Chicago Rake mounts at the back of the SURF RAKE and digs 12 inches (30cm).

This allows deeply buried sand to be elevated to the surface and exposed to the sun, killing the bacteria and ecoli in the process.

Order your Barber SURF RAKE Model 600HD with the new “Chicago Rake” or retrofit the attachment to an existing unit!
